Analysis: Eigenvalues Centrality

Eigenvector centrality tells us which heroes have the biggest impact in a game... positive or negative

Patch 6.28A

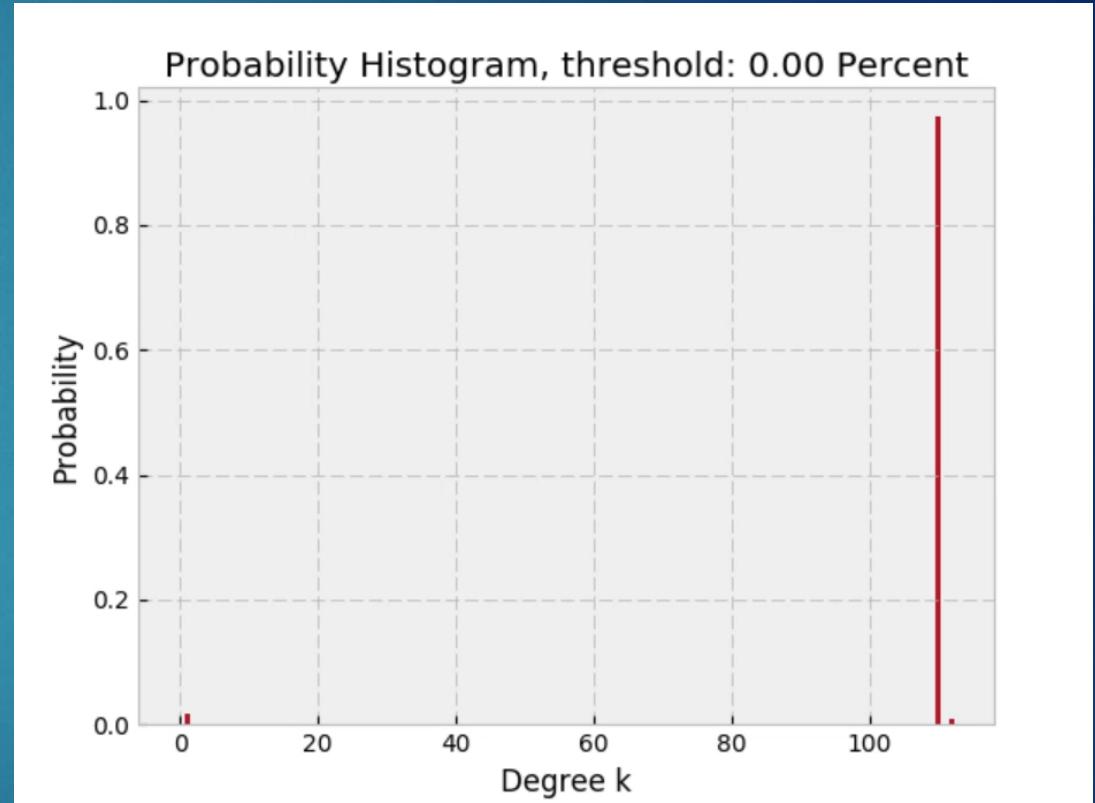

- ▶ Top centrality ordered greatest to least – win rate in parentheses:
 - ▶ Arc Warden (Win rate: -12%)
 - ▶ Faceless Void (WR: -10%)
 - ▶ Broodmother (WR: -10%)
 - ▶ Oracle (WR: -8.2%)
 - ▶ Death Prophet (WR: -7.7%)

Patch 6.28B

- ▶ Top centrality ordered from greatest to least - win rate in parentheses:
 - ▶ Broodmother (Win rate: -10%)
 - ▶ Io (WR: -9.5%)
 - ▶ Queen of Pain (WR: -7.2%)
 - ▶ Storm Spirit (WR: -7.3%)
 - ▶ Meepo (WR: -7.9%)

Analysis: Graph Percolation

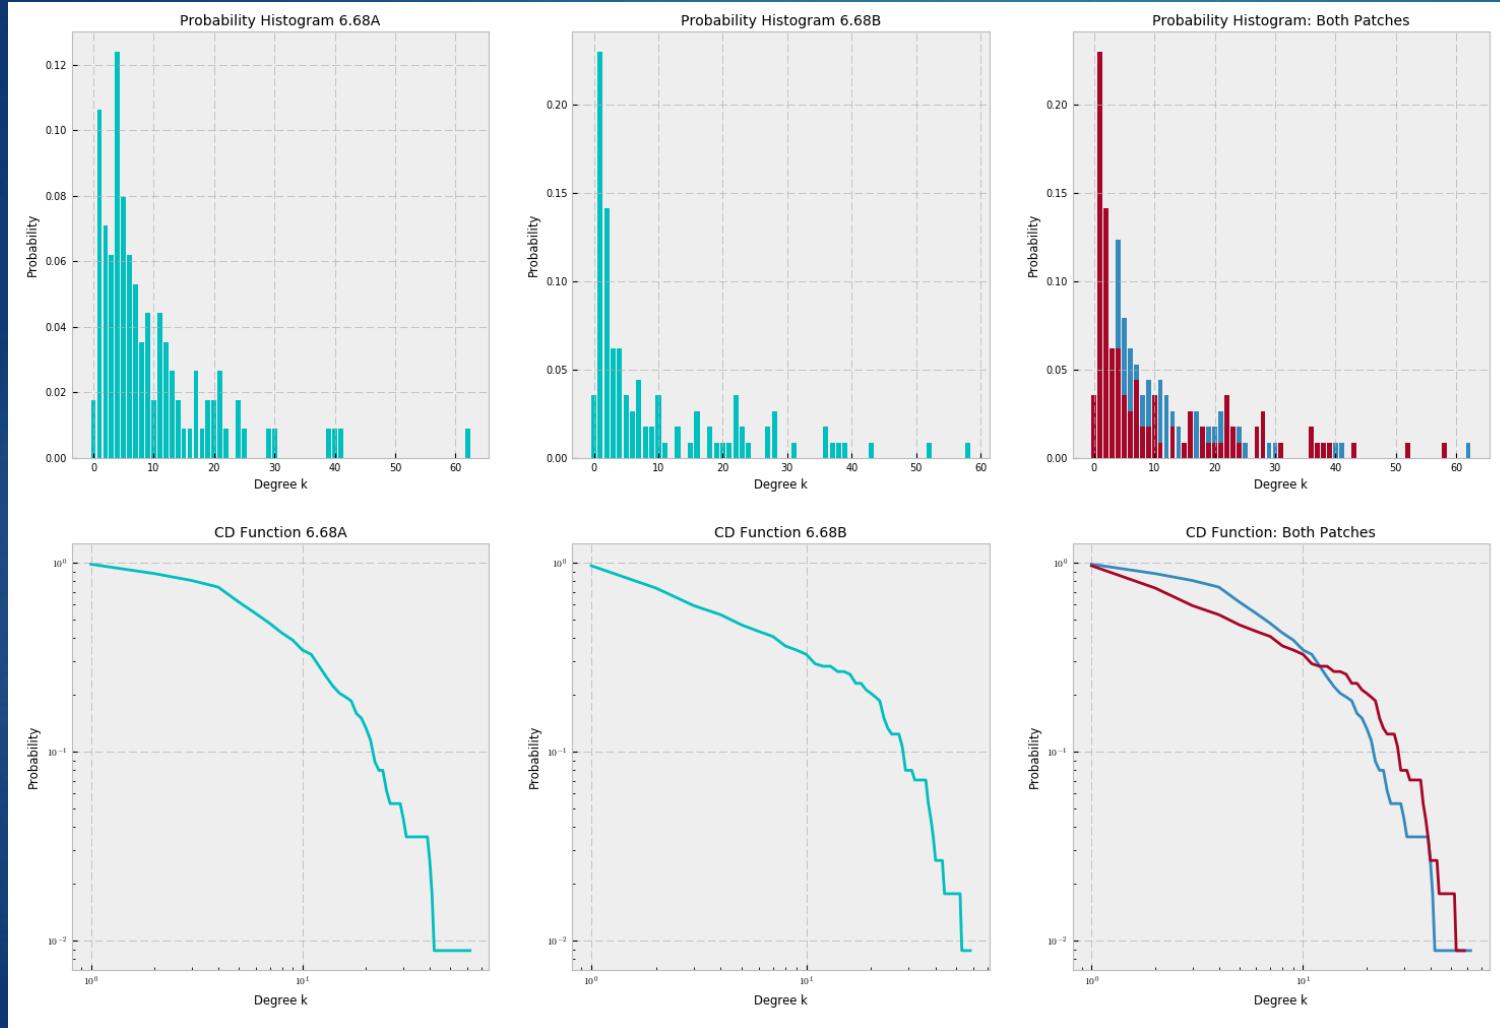

- ▶ Percolation was performed on edges according to a threshold value
 - ▶ Example: edges with less than $\pm 10\%$ fluctuation in win rate from the baseline of 50% were deemed non-significant and removed.
- ▶ Reduced complexity, saved essential information
 - ▶ Easy to work with
 - ▶ Allows for modeling with an synthetic ER or BA graph
- ▶ As the percolation threshold was increase the networks distributions moved from ER form graph to BA form

Analysis: Graph Percolation

- ▶ As the graph moves to an Scale – Free form, we are able to gain certain information more easily from the graph
 - ▶ Able to assign nodes a degree centrality
 - ▶ High impact and low impact nodes easy visible
 - ▶ High degree nodes have a high amount of impact with many different hero team mates
 - ▶ The nodes with low degree represent heroes that have high impact but only when linked with a few specific heroes

Analysis: Scale – Free Form

- ▶ Attempt was made to fit comparable Degree Distributions
- ▶ Thresholding values:
 - 6.68A: ± 0.122
 - 6.68B: ± 0.11

Probability of Degree Distribution:

- ▶ (6.68A):
 - ▶ $P_k \sim k^{3.88}$
- ▶ (6.68B):
 - ▶ $P_k \sim k^{3.44}$

Analysis: Highest Degree Heroes

- ▶ Degree Centrality
- ▶ Hero degree for ER graph (6.68A):
 - ▶ Arc Wardan: 62 (Win Rate: -12%)
 - ▶ Faceless Void: 41 (WR: -10%)
 - ▶ Omniknight: 39 (WR: 11%)
 - ▶ Death Prophet: 30 (WR: -7.7%)
 - ▶ Storm Spirit: 41 (WR: -6%)
- ▶ Hero degree for ER graph (Patch 6.68B)
 - ▶ Broodmother: 58 (WR: -10%)
 - ▶ Io: 52 (WR: -9.5%)
 - ▶ Omniknight: 43 (WR: 11%)
 - ▶ Storm Spirit: 39 (WR: -7.3%)
 - ▶ Oracle: 38 (WR: -7.6%)
- ▶ Only Omniknight has a high-than-50% win rate (61%)
- ▶ Compliments eigenvector centrality results

Analysis: Best Teams

Top Team: A completely connected group of five nodes with the highest average edge weight between them. Therefore, it is similar to a clique but of only five nodes maximum.
